

2022 Summer Teacher Tours

Hosted by Minnesota Agriculture in the Classroom

The Minnesota Agriculture in the Classroom Program (MAITC) is excited to offer a unique summer professional development opportunity for K-12 educators. Our Summer Teacher Tours allow educators to observe and experience current agricultural production, processing and distribution techniques, as well as exposure to a wealth of standards-based, agriculture themed lesson plans and resources. Participants will network and share how they intend to use these experiences and resources to integrate agriculture into their curricula to improve student achievement by applying authentic agricultural examples to teach core curriculum concepts in science, social studies, language arts, math and nutrition.
